Top Channel (Markov)
Referral

Modeling channel interactions shifts credit away from Display Ads

Markov credit share minus average of first-touch, last-touch & linear (percentage points)

Display Ads leads every position-based model; Referral leads Markov

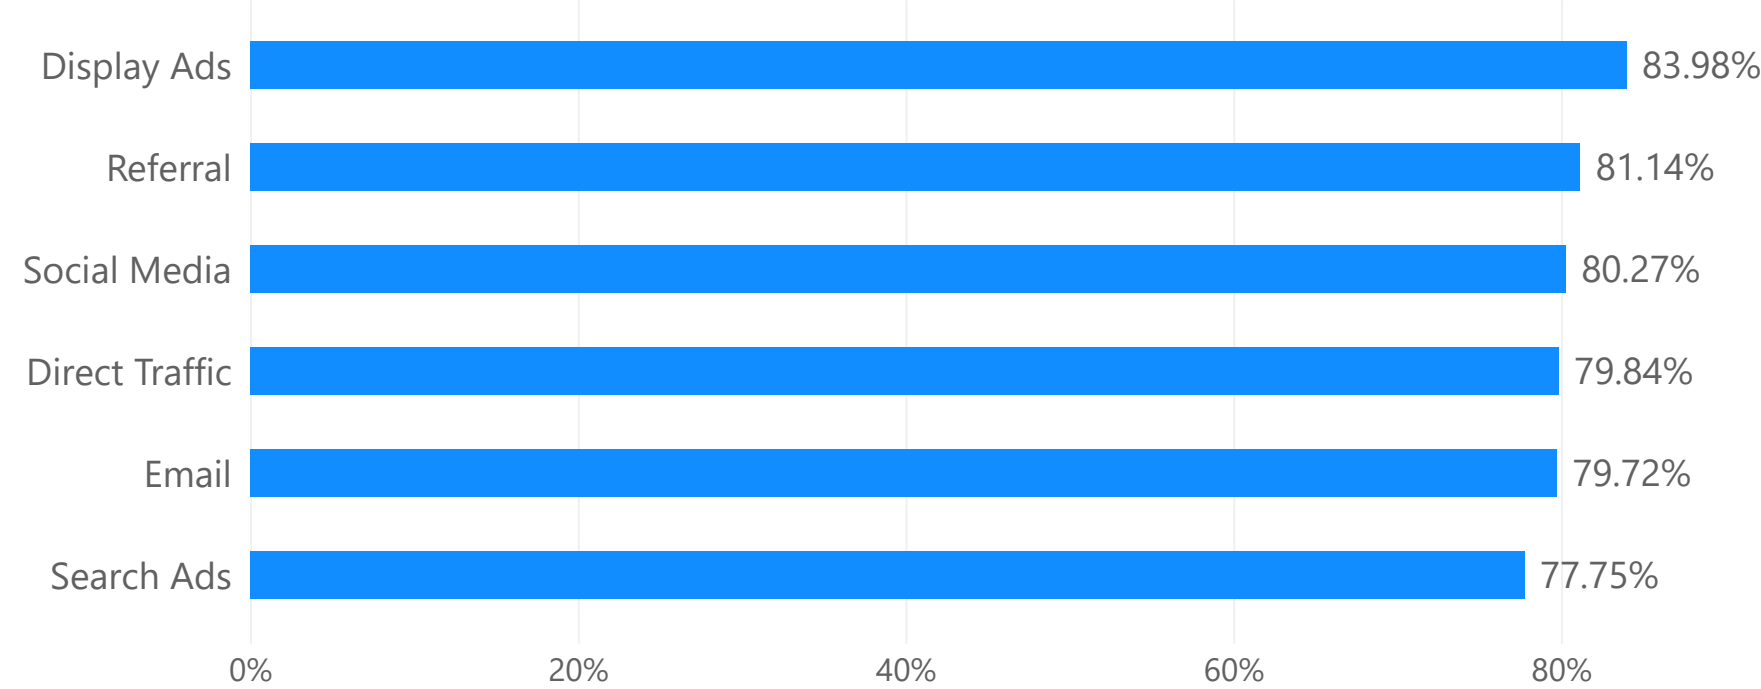

Credit share by channel · highlighted = #1 in each model

Channel	First-Touch	Last-Touch	Linear	Markov (Data-Driven)
Direct Traffic	17.3%	16.9%	17.0%	16.7%
Display Ads	18.0%	17.4%	17.8%	16.9%
Email	15.7%	16.4%	16.0%	16.2%
Referral	17.1%	17.3%	17.2%	17.6%
Search Ads	15.6%	14.7%	15.3%	15.5%
Social Media	16.3%	17.3%	16.7%	17.1%

Model Detail: What's behind the shift?

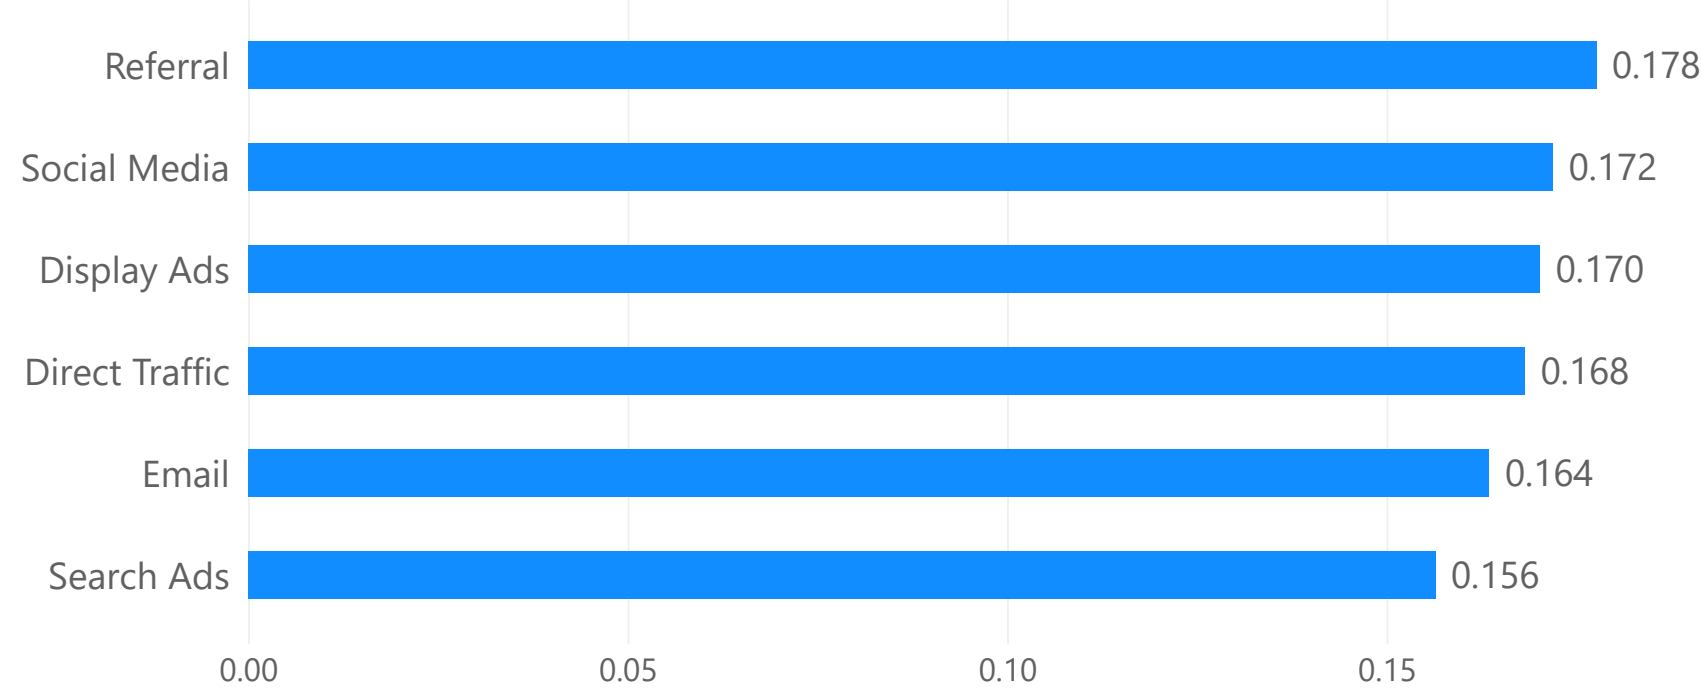

Conversion rates are similar across channels (78% to 84%)

% of users who touched the channel and converted

Referral drives the most conversions when channel interactions are modeled

Markov removal effect: drop in conversion probability when the channel is removed

59% of converters had a single touchpoint, leaving position-based models nothing to disagree on

Converters by number of touchpoints before first conversion
